Drupal 8 remove barriers and allow site builders to simple do what they do best: BUILT GREAT!!

- Customization options: Using Views to easily customize the front page, listing blocks or create custom admin pages, customize filters, and actions.

- Powerful custom blocks: add fields on custom blocks and create different custom block types, providing more ways to present content.

- Accessibility integration: support for standard accessibility technologies

- Easy configuration management: Site configuration information is now stored in files in your library's directory, making easier to transport configuration changes between environments

More powerful and flexible for site builders

Drupal 8 has moved some interesting functionality into core, so you don't have to wait for the migration of some contrib module to use it!

- Views
- i18n
- CTools
- Entity reference
- Webform
- Date
- Wysiwyg
- Insert
- ….

1 - New admin toolbar

I will do a live demo showing the new admin look and feel and how the responsive is working in public and private interface.

I will also show the new and most curious items of the admin menu like "back to the site" or "extend"

2 - Blocks

I will do a live demo showing the new block admin page:
- *Explain why the new interface is better.*
- *How you can now use more than 1 time the same block.*
- *How you can cache each block in an independent way.*
- *How you can now search a block in the admin page of blocks.*
- *How now you can chose if you want to show the title or not (not <none> anymore!)*

Then I will create a custom module and go to the custom blocks admin page to show that now we have different pages for blocks and custom blocks.

3 - Comments

I will do a live demo showing
- *The comment admin page*
- *How you can create new types of comments*
- *How you can change the display of them*

Then, I will create a new type of comment to show how to do it, how you can change the view display, etc.

4 - Content type

I will do a live demo showing the new field types like:
- *Entity reference*
- *Date*
- *Link*
- *Email*
- *Telephone*
- *Picture (and user picture as a field in the profile)*

I will explain why now you can use the same name machine for differents fields.
I will show how to add a custom block and a custom type of comment to a content type.

Then I will create a new content type with some common fields and the custom block and a comment type already created referenced in my new type.

5 - CKeditor

I will do a live demo showing:
- *New formats (HTML)*
- *New buttons added*
- *Improvements in adding images (caption, resize, etc)*

6 - Content admin page

I will do a live demo showing:

- *How to create a new node (based on the type that I created)*
- *Add in the body a picture to show what I explained about the CKEditor.*
- *Add the custom block that I already created.*
- *Add the comment type that I already created.*
- *How is working the responsive of images in the public interface.*
- *The quick edit button.*

The I will show:

- *New content admin page*
- *New list of files*

7 - Field UI

I will do a live demo showing:
- *How now you can change the display of the forms (using as a example the register form)*
- *Where you can find now the display modes admin page*

The I will change the form display of my content type and show how the node form with the changes.
I will do the same with the comment form of my type.

8 - Extend page

I will do a live demo showing:
- *How is now the modules page.*
- *How you can now search modules*
- *A resume of modules that are part of the core now.*
- *A resume of modules that won't be part of the core anymore and why*

9 - Multilingual + Tours

Explain the benefits of having multilingual in core.

I will do a live demo showing:
- *How to configure one more language and how Drupal 8 imports all translations*
- *New configuration translation page*
- *The friendlier interface of multilingual - Tours*

I will edit my content type to make it multilingual. Then I will create content in different languages and translate some menu items, terms of a vocabulary and a custom block.

10 - Content management
The benefits of having the configuration management into a yml file and why this improvement (problems to deploy configuration changes in production environments)
Bye bye features

I will do a live demo showing:
- *How to import / export configuration*
- *Change something in the configuration of my site, export this configuration to another website to see how is working the importation and how Drupal 8 can show the updates.*

So....

Drupal™

will be awesome!!
